

## Why buy an Athlegen electric power driven table?

release date 29.09.16

### Athlegen Pro-Lift Range

Commercial quality tables that will provide years of outstanding service in a busy clinic environment. Designed and made in our own Australian factory. We use high quality Australian steel with metal profiles that have thicker walls to produce a table base that is up to 30% heavier and at least 90% stronger than any equivalent competing product. A Pro-Lift table is built to last a lifetime, with super-fast responsive motors, they are strong, they won't get noisy, and will always be a pleasure to work with.

We offer you an unrivalled choice of models from a comprehensive selection of standard products, or we can customize a table to suit your specific requirements. Standard features and options have been developed with patient needs, practitioners, professional associations and our 30 years of industry experience. Only the highest quality components are used in an Athlegen Pro-Lift table.

### Centurion Value-Lift Range

Quality treatment tables compared with other comparably priced imported products. Because we buy in bulk, and offer a limited range of models, sizes, colours and options, we are able to keep the price to an absolute minimum. Great tables for students or professionals just starting out. We guarantee you won't buy a better table for the money.

### Accessories

A full range of accessories are available for all our tables

The product ranges above meet all our strict QC requirements. We stand by every product we sell with the best warranty in the industry; and we provide servicing by our own caring employees covering most major population centres in Australia.
